

Barrel Clamp

Barrel Clamps - Known as "Barrel Clamp", this hydraulic attachment is used on forklifts so as to squeeze objects that you wish to move utilizing the forklift. Usually, they're used so as to paper rolls, barrels, and handle kegs, with a few barrel clamp designs being able to rotate the cargo. For example, the revolving function enables the person operating the forklift to be able to insert a vertically stored paper into the horizontal intake of a printing press.
