

Carriage Rollers

Carriage Rollers - Carriage rollers are specially designed bearings which are utilized on lift masts to be able to help them operate within tough environmental conditions. Lift masts are frequently subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is often exposed to environmental influences like for example heat, dust, cold, moisture, contamination and aggressive ambient air. Hence, the guidance arrangements of lift masts have to be specifically strong and have a certain high load carrying capability.

In order to help compete in many different environmental surroundings, carriage rollers were designed for many lift masts. While having the ability to deal with a particularly high load carrying capacity, these bearings provided a cost-effective operational security for the guidance arrangement of the lift masts.
